Summary

That's a case for the famous LILYGO T3 LoRa device, with room for a standard 3.6v LiPo battery. No screws needed.

That's a case for the famous LILYGO T3 LoRa device, with room for a standard 3.6v LiPo battery. No screws needed, you can just print it and close it with the device inside. No supports required. PETG is better but PLA also works well.
